Trans. of Beton Herstellung Verwendung (West Germany) 1962, v. 12, no. 11, p. 496-500.

DESCRIPTORS: *Concrete, Temperature, Thermal stresses, Mechanical properties, Quality control.

Strong heat development in concrete during setting and hardening can lead to thermal damage. Causes of high temperature in concrete are analyzed. The cited results of temperature measurements in concrete of structural members should make it possible to estimate the expected temperature rise in concrete in various structural elements. Fresh (young) concrete is particularly vulnerable to cracking. It not only has

METHOD OF CONSTRUCTION USING PRECAST CONCRETE SHUTTERING SLABS. [1961] 7p.
Order from SLA $1.10 61-18986

Trans. of Beton und Stahlbetonbau (Germany) 1950, v. 45, no. 5, p. 116-118.

DESCRIPTORS: *Housing, Structures, Construction, Materials, *Concrete, Civil engineering, Germany.

The method of construction with precast concrete shuttering slabs which can be used for any thickness of wall of 25 cm or more, is applicable not only to housing and industrial buildings but also for retaining walls, bridge piers and other concrete structures. The economy effected is due to the three main advantages of the method: the slabs form part of the structure; timber or steel shuttering is unnecessary; and practically all plastering is eliminated.
